

Project description:

Trouble wrangling your friends to get together to do an activity? We want you to use the Bored API (<https://www.boredapi.com>) and the Ticketmaster API (<https://developer.ticketmaster.com>) to give users suggestions for things to do on the weekend. When they find an event they want to attend or do with friends, allow them to create a new event page. They can share this with their friends to organize an event!

Requirements:

- Use the Ticketmaster API to get info for upcoming events and/or the Bored API for ideas of things to do
- Allow users to make an event in Firebase that gives a photo (use the Unsplash API to get appropriate photos for the Bored API) and other relevant information about the event
- Allow the event makers to include a personal description of the event
- Provide a link for them to be able to share with the invitees of the event
- A display page of all the events happening so that people can invite themselves
- Proper error handling. For example:
 - If a user types in a query that yields no result - they should be provided feedback (e.g. there were no items found)
 - API loading states

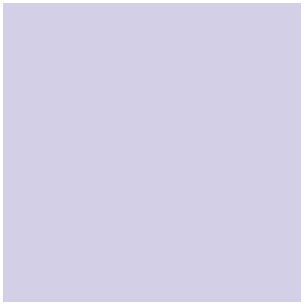

Stretch goals:

- Event pages could have a discussion area
- The users could log in to save their own events and make private events with other members.
- Drag 'n' drop functionality

Deliverables:

- Project files up on GitHub
- Project up on GitHub pages or your own URL
- All requirements completed BEFORE any stretch goals have been attempted
