

Client Brief

Concert Accountant

Project description:

Create an app that helps me financially prepare for all the concerts and shows I wanna see this year. Allow users to enter a budget for each list and let them add shows by ticket price until that budget is met.

Requirements:

- Uses Ticketmaster API
- Uses Firebase
- Users can enter a budget for their list.
- Users can name the list.
- Users can search for a concert/show.
- Search results should display relevant information (e.g. Performer, dates, venue, ticket price range)
- Users can add/remove shows on their list.
- Users publish their list publically once they're happy with it.
- Complete published lists page broken down by price (i.e. \$100 lists of concerts, \$200 lists of concerts, etc.)

Stretch goals:

- Fun loading animation
- Sorting and filtering for search results
- Pagination for search results
- Add a chart to show cost trends across multiple lists
- Personal authorization - allow users to make their lists private.

Deliverables:

- Project files up on GitHub
- Project up on GitHub pages or your own URL
- All requirements completed BEFORE any stretch goals have been attempted
