

Client Brief

Last minute cocktail generator

Project description:

This chronic last minute party planner needs a cocktail generator! Create an app that allows the user to enter an ingredient they have lying around at home and provide them with potential cocktails to make.

Requirements:

- Uses the [CocktailDB](#) API and Firebase
- Allow users to search for potential cocktail recipes
- Display potential cocktail recipes - provide users with the option to see more details about the cocktail
- Allow users to save/unsave recipes they like
- Allow users to add notes/tips to saved recipes (e.g. “didn’t have Gin and swapped it for Vodka and it turned out alright”)
- Add a 5 star rating system - saved items can be rated
- Proper error handling. For example:
 - If a user types in a query that yields no result - they should be provided feedback (e.g. there were no cocktails found)
 - Common error responses should be handled

Stretch goals:

- Fun loading animation
- Sorting and filtering for search results and/or saved cocktails
- Pagination for search results and/or saved cocktails
- Authorization and Guest login. Guest login should have the same functionality as authorized users, except authorized users’ saved cocktails will be private. Guests can see other guests’ cocktails. (Guest account means the app should have a flow where there is no authorization required)

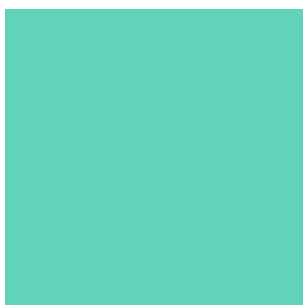

Deliverables:

- Project files up on GitHub
- Project up on GitHub pages or your own URL
- All requirements completed BEFORE any stretch goals have been attempted

Style Guide

Last minute cocktail generator
