

Project description: Create an app that helps organize Dinner Parties. Allow users to search for recipes and add multiple recipes to the party. Help these party participants get organized by creating a list of ingredients for all of the recipes chosen and allow party participants to call dibs on what ingredients they will be bringing.

Requirements:

- Uses the Zomato API and Firebase
- Users can create a list with relevant party data (date, number of guests)
- Allow users to search for a recipe
- Allow users to add a recipe to a party
- Users are able to delete a recipe
- Display ingredients of all dishes in one big list
- Allow users to call dibs on the ingredients they intend to bring
- Proper error handling. For example:
 - If a user types in a query that yields no result - they should be provided feedback (e.g. there were no items found)
 - Common error responses should be handled
 - API loading states

Stretch goals:

- Have a chat-like area for the party (for people to highlight their allergies)
- Authorization and Guest login. Guest login should have the same functionality as authorized users, except authorized users' can favourite lists, and can see those favourited lists in isolation. (Guest account means the app should have a flow where there is no authorization required)

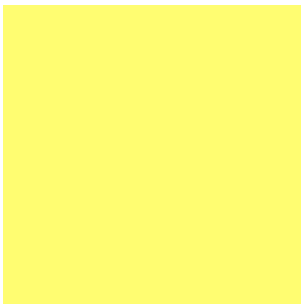

Deliverables:

- Project files up on GitHub
- Project up on GitHub pages or your own URL
- All requirements completed BEFORE any stretch goals have been attempted

Deliverables:

- Project files up on GitHub
