

Project description:

Have you ever wondered what your pigment inclinations say about hue? Or questioned which classical piece of art most reflects your aura? Can you sing with all the voices of the mountain? Can you paint with all the colours of the wind Rijksmuseum? This application will utilize the Makeup API to help the user choose a colour - their selection will then be used to show a painting from the Rijksmuseum featuring that colour

Requirements:

- Use Makeup API (<https://makeup-api.herokuapp.com>)
- and Rijksmuseum (<https://data.rijksmuseum.nl/>) API
- Users will select the makeup brand they prefer
- Based on brand selection, a list of 7 random product colours available in that brand will appear
- Based on colour selection, display a painting featuring that colour
- Proper error handling. For example:
 - If a user types in a query that yields no result - they should be provided feedback (e.g. there were no items found)
 - Common error responses should be handled
 - API Loading states

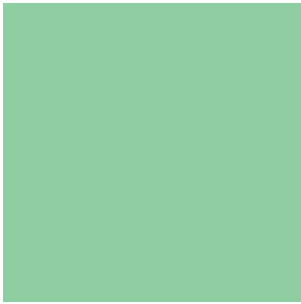

Stretch goals:

- Users can input makeup brand or product and based on their input a selection of colours will appear
- Only display paintings which feature the chosen colour at a specific critical mass (>15%)
- Allow the user to select multiple colours and generate a gallery of paintings

Deliverables:

- Project files up on GitHub
- Project up on GitHub pages or your own URL
- All requirements completed BEFORE any stretch goals have been attempted

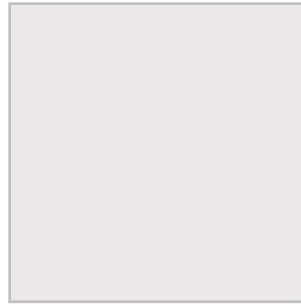

Brand Colours:

#8fcda3

#0e3e36

#ebe8e9
