

**Project description:** Build an app that helps users decide which tv show they should start binging next. It allows users to create lists (e.g. Best shows with an all-female cast, Best shows on NBC, Best shows on HBO, Best shows to watch for a laugh, etc). Users can search for a show and add it to a list. Each superlative list should highlight (in any way you like) the top 10 shows for that list.

## Requirements:

- Uses TVmaze API and firebase
- Users can create lists of superlative tv-shows
- Users can add to the list of superlative tv-shows
- Users can search for a tv show, based on a query, to add to their list. Search results should include some relevant information for the thumbnail (e.g. Title, image, network, country, genre, description/summary)
- Users can upvote/un-upvote shows on a list, this would affect how the top 10 shows are highlighted
- Proper error handling. For example:
  - If a user types in a query that yields no result - they should be provided feedback (e.g. there were no items found)
  - Common error responses should be handled
  - API loading states

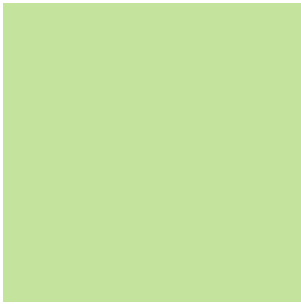

## Stretch goals:

- Users can click on a show to get more information
- Filtering on search results
- Pagination on search results
- Authorization and Guest login. Guest login should have the same functionality as authorized users, except authorized users' can favourite lists, and can see those favourited lists in isolation. (Guest account means the app should have a flow where there is no authorization required)

## Deliverables:

- Project files up on GitHub
- Project up on GitHub pages or your own URL
- All requirements completed BEFORE any stretch goals have been attempted

## Brand Colours:

#C4E39C

#00B6F9

#F77A9B

Heading Font: Josefin Sans (Semi-Bold 600)

# HEADING FONT

Body Font: Lato (Light 400)
