

Project description:

An app that will help users set a reading goal - (e.g. 50 Books to read in 2020). Users can search for a book via the title or author. For each search result, the app will show information related to the book (e.g. Title, author, rating, genre, description, number of pages, etc). Users can save a list of books they want to read for the year and track which book they read and have yet to read.

Requirements:

- Uses GoodReads API and Firebase
- Users should be able to search books
- Users should be able to add to and remove books from their list
- Users should be able to create multiple lists (e.g. “Books to read in 2020”, “Books to read in 2020”, “Thriller books to read”). Users should also be able to remove lists.
- The app should calculate the percentage of goal/list completion (5/10 books 50% of reading goal completed).
- Proper error handling. For example:
 - If a user types in a query that yields no result - they should be provided feedback (e.g. there were no books found)
 - Common error responses should be handled
 - Before deleting a list they should be prompted with a custom confirmation box
 - API loading states

Stretch goals:

- Sort all book lists by date created and goal completion
- Filtering
- In the search results, have a button to purchase the book (potentially look into iTunes API)
- Users should be able to edit the name of their lists
- Sort individual book list by number of pages

Deliverables:

- Project files up on GitHub
- Project up on GitHub pages or your own URL
- All requirements completed BEFORE any stretch goals have been attempted

Brand Colours:

#E76155

#FOB377

#CCCC97
