

Project description:

Dinner dates, bachelor parties, prom nights, and game nights. These social events are fantastic, but think about the mess, expensive outings, and rowdy crowds. Hard pass. Why not fill the time with some great TV shows during these social events in the comfort of your own home with or without a crowd.

Requirements:

- Use TVMaze API and Firebase
- With Firebase, create a collection of 6 social events with their relevant details, such as the following:
 - Name, i.e., Date Night
 - Type, i.e., Food & Drink
 - PartySize, i.e., 2
- Prompt the user to select a social event and identify the day of the week, then filter the current running TV shows based on the selection
- Allow user to filter the result by genre
- Display the final result dashboard showing the upcoming social event and what the user is doing instead
- Proper error handling. For example:
 - If a user types in a query that yields no result - they should be provided feedback (e.g. there were no items found)
 - Common error responses should be handled
 - API Loading states

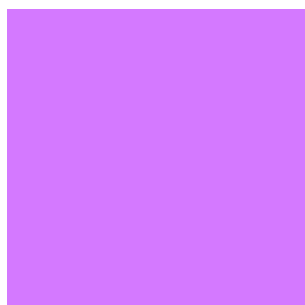

Stretch goals:

- User can create new social events
- Generate a suggestion with a random social event and matching TV shows
- Restrict the time span to be less than 4 hours or based on user specified time

Deliverables:

- Project files up on GitHub
- Project up on GitHub pages or your own URL
- All requirements completed BEFORE any stretch goals have been attempted

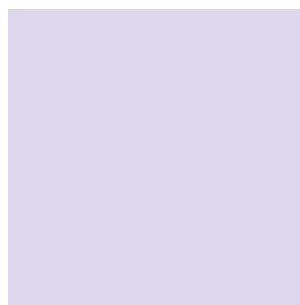

Brand Colours:

#df7980

#3a1879

#ded6ed
