

# Client Brief

## Makeup Matcher

---

### Project description:

Create an app that allows the user to search for makeup products by category (eg: mascara, lipstick etc) and price range and save those to a list they can reference when they are ready to shop.

### Requirements:

- Uses the [Makeup API](#) and firebase
- Users can search for makeup by category (blush, bronzer, eyebrow, eyeliner, eyeshadow, foundation, lip liner, lipstick, mascara, and nail polish)
- User can select a price range for the products they want to search
- Searched results will return and display an image, price, brand, and product colours (if they exist in the response) displayed as a palette for each item returned
- Users are able to favourite/save items to a list, and delete the items if they choose
- Proper error handling. For example:
  - User has chosen option for the category

### Stretch goals:

- Users can search by brand
- Add tag filters to the search (eg “Vegan”)
- Pagination for searches yielding more than 5 results

### Deliverables:

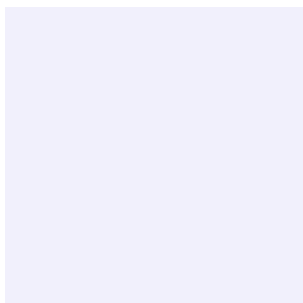

- Project files up on GitHub
- Project up on GitHub pages or your own URL
- All requirements completed BEFORE any stretch goals have been attempted
