▣ Client Brief

— Binge Fest —

Project description:

Help two indecisive roommates not leave the house for two days. Use the Yelp API and TV Maze API to provide a show to binge watch and a place to get takeout from. Users can search for a TV show and add it to a watch list. Users can also search for a place to get takeout from and add it to the restaurant list. At the click of a button, offer the roommates a random combo for the evening.

Requirements:

- Uses the Yelp API
- Uses the TV Maze API
- Uses Firebase
- Users can search for and add/remove shows to a list. This list is saved in Firebase.
- Users can search for and add/remove restaurant to a list. This list is saved in Firebase.
- Search results should show relevant information. For example:
    - TV: title of show, poster, description, cast
    - Restaurant: Name, cuisine, phone number, rating
- User is provided with a random show and restaurant combo
- Proper error handling. For example:
    - If a user types in a query that yields no result - they should be provided feedback (e.g. there were no items found)
    - Common error responses should be handled

Stretch goals:
- Fun loading animation
- Sorting and filtering for search results
- Pagination for search results
- Users can save combos, and add a personal note to each one 'Food was good, eggplant dish was great, we should order it again. Show was kinda meh"
- Authorization and Guest login. Guest login should have the same functionality as authorized users, except authorized users' saved lists will be private. Guests can see other guests' lists (Guest account means the app should have a flow where there is no authorization required)

Deliverables:

- Project files up on GitHub
- Project up on GitHub pages or your own URL
- All requirements completed BEFORE any stretch goals have been attempted
