Ethical Makeup
Client Brief

Project description:

Create an app that helps users collectively discover and review, ethical cosmetic products. Users can search for a product using a query (e.g. 'lipstick', 'eyeshadow', etc).

The app will only return products that fit that query and that is 'vegan'. Users can choose a product and add their personal review of the product and rate the product with would repurchase/wouldn't repurchase.

Requirements:

- Use [Makeup API](#) and Firebase
- Users can search for makeup based on a query
- Users can click for more details on a product (e.g. price, link to purchase, color values, photo, original rating, would repurchase/wouldn't repurchase rating)
- Users can add a personal review to the product
- A product can have multiple reviews
- Proper error handling. For example:
  - If a user types in a query that yields no result - they should be provided feedback (e.g. there were no products found)
  - Common error responses should be handled
 - API loading states

Stretch goals:

- Filter search results based on additional criteria (eg. EcoCert, Non-GMO, Fair Trade, etc)
- Sorting (e.g. alphabetical, original rating, price)
- Authorization and Guest login. Guest login should have the same functionality as authorized users, except authorized users' can save products they want to try

Deliverables:

- Project files up on GitHub
- Project up on GitHub pages or your own URL
- All requirements completed BEFORE any stretch goals have been attempted

Brand Colours:

#7BE0AD	#AEE5D8	#E7E5E5
