Project description:

Make a Single Page Application (SPA) that allows writers and diarists to get some focused work done. The client is looking to create a free writing app that will give users a writing prompt, a timer and a quiet place to write.

Requirements:

- Users should be able to choose an amount of time to write for and have a timer started for them.
- If they are not typing for more than 15sec while the timer is in session, there is a warning to return the user to the task of writing.
- The UI should be uncluttered to promote focus.
- Provide Light and Dark mode
- Create a communal daily writing prompt that users can opt in to and contribute new prompts to.
- Proper error handling. For example:
    - Sensible formatting for the writing area
    - Common error responses should be handled

Stretch goals:

- Once the timer is finished the user has the option to title and save their work to an account or give an option to export it as a pdf.
- Suggest a song/playlist from Spotify or iTunes Playlist API (or any other API) that is the same length as the timer.

Deliverables:

- Project files up on GitHub
- Project up on GitHub pages or your own URL
- All requirements completed BEFORE any stretch goals have been attempted

Brand Colours:

#78CAD2   #23395B   #EAE5E9

Heading Font: Josefin Sans (Semi-Bold 600)
